

Smart Energy and Mobility Transition Modelling Future Solutions for Europe and the MENA-Region

August 30 to September 3rd, 2021

Online Summer School and Networking Event – Preparing for Post-Covid

How will Energy and Mobility look like at the end of the 21st century? Europe and the MENA-Region are major playing fields for the development of Smart energy and Mobility Transition. At our Summer School, you will receive an overview of both topics and regions, as well as methodological knowledge, which will show you to model solutions and sharpen your research profile in these areas. We will have (optional) networking events before and after the Summer School, which will allow you to network with other participants already beforehand and afterwards. In these networking events, we will further include external stakeholders/partners in the fields of Smart Energy and Mobility Transition from Germany/Europe, as well as Egypt/the MENA-Region.

Furthermore, take also a look at the “PowerTAC” Call, in which you can apply your knowledge and participate in a Smart Energy model simulation game (powertac.org/) while extending your knowledge on Machine Learning.

Are you a Bachelor, Master, or Ph.D. student with strong interests in smart energy and mobility transition? Do you want to network with an international network of scientists from Europe and the MENA region?

Then check our website for further information and for applying basef-network.com/
